## Project Design Phase-II Technology Stack (Architecture & Stack)

| Date          | 15 October 2022   |
|---------------|---|
| Team ID       | PNT2022TMID10926  |
| Project Name  | Fertilizers Recommendation SystemFor Disease Prediction |
| Maximum Marks | 4 Marks   |

## **Technical Architecture:**

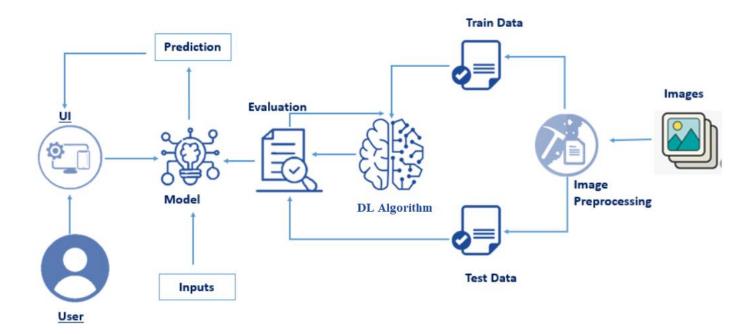

Table-1: Components & Technologies

| S.No | Component           | Description   | Technology    |
|------|---------------------|---|---------------|
|      |                     |   |               |
| 1.   | User Interface      | How the user interacts with the application .To depict the human-computer interaction | HTML, CSS,JSP |
|      |                     | and communication.  |               |
| 2.   | Application Logic-1 | A page to upload images as input  | Python        |
|      |                     |   | •             |

| 3. | Application Logic-2    | To use the Machine Learning model and predicting the result   | Python                           |
|----|------------------------|---|----------------------------------|
| 4. | Database               | Structured data-images  | MySql                            |
| 5. | Cloud Database         | Database that typically runs on a cloud computing platform and access to the database is provided as-a- service | IBM Cloud Databases for<br>MySQL |
| 6. | File Storage           | To store data in a hierarchical structure   | Local File system                |
| 7. | Machine Learning Model | Here, we use a Support Vector Machine Algorithm that is used widely in Classification and Regression problems.  | Random Forest ,XG Boost          |

## **Table-2: Application Characteristics:**

| S.No | Characteristics          | Description  | Technology  |
|------|--------------------------|--|---|
| 1.   | Open-Source Frameworks   | Flask micro web framework  | Written in Python. It is classified as a micro frame work because it does not require particular tools or libraries. It has no database abstraction layer, form validation, or any other components where preexisting third-party libraries provide common functions. |
| 2.   | Security Implementations | With all aspects of the job, including detecting malicious attacks, analyzing the network endpoint protection and vulnerability assessment, Sign in encryption | IBM Cloud App ID Services   |

| 3. | Availability | Available for all data size                  | -                |
|----|--------------|--|------------------|
| 4. | Performance  | Can extend the storage accordingto our needs | Python,AngularJS |
